

WHAT IS ASSURED IP SERVICES?

Assured IP Services provides an end to end solution for IP Telephony services allowing your business to generate increased revenue with complete peace of mind.

Whether SIP Trunking or Hosted IP, Gamma manage the access solution, on site CPE and network service on your behalf. Put simply, it's IP Telephony with SLA's.

WHAT ARE THE BENEFITS OF ASSURED IP SERVICES?

- End to end telephony services you can sell with complete confidence
- Peace of mind - guarantees on availability, time to fix, and voice quality
- Speedy fault resolution - full diagnostic service across platform, access and up to the router
- 24/7 support service for 24/7 businesses
- High specification router, pre-configured and monitored by Gamma with next day replacement
- Bigger market opportunity - a cost effective access solution for the 5-10 channel market

HOW DOES IT WORK?

Assured IP Services is available across Gamma's entire spectrum of Hosted IP and SIP trunking products which include Communicator, Converter, FeaturePlus and IP DirectConnect. For each of these products, Assured IP Services delivers a service availability guarantee, voice channel guarantees, a high specification router and guaranteed time to fix.

WHO DO YOU SELL IT TO?

Assured IP Services will be attractive to businesses who are looking for an IP telephony hosted solution that is fully supported by one provider, to stringent and

effective service levels, with support for all elements of the service. It will also be a viable option for businesses who may be considering a SIP trunk solution as an alternative to ISDN (up to 10 channels) with guarantees on availability and voice quality.

With Assured IP Services Gamma take care of all of the components of the IP Telephony jigsaw giving you complete peace of mind

SO, ARE YOU LOOKING FOR....?

- A complete solution that allows a Service Level to be provided to the end customer on availability and call quality
- A service delivered by an organisation that can provide and manage the complete solution including the equipment on the customer premises
- New markets to target for IP telephony with the confidence that service reliability will not be problem
- One organisation to go to should anything become a problem
